

The CMS *handbook*

How the Mjazo team edits the website: pages, services
and prices, pictures, Urdu and SEO.

● For everyone who signs in at mjazo.vercel.app/admin
October 2026 · Ghar ka har kaam. Pakka.

EDIT · PUBLISH

Edit the website *yourself*.

Everything on the Mjazo website can be changed at **mjazo.vercel.app/admin**, no code needed: services and prices, every page, menus, the blog, help articles, legal text, pictures, SEO and the Urdu site. Customers see nothing until someone publishes.

Your first edit in five steps

- 1 **Sign in** at `/admin` with your email. Owners and Admins also type the code from their authenticator app.
- 2 **Find the thing** to change in the menu on the left. Or open **Live preview** and click the text you want to edit.
- 3 **Make your change**. It saves by itself as a draft a moment after you stop typing.
- 4 **Check it** with **Preview**, which shows the real page with your draft, only to you.
- 5 **Publish**. The website updates straight away. Changed your mind? **History** brings back any earlier version.

In this handbook

Your account: signing in, two-step sign-in and roles	3
The admin at a glance, and what each status means	4
Edit, check, publish	5
History, the activity log and backups	6
New pages from blocks	7
Pictures and Urdu	8
SEO, addresses and special text	9
Writing for Mjazo, and when something goes wrong	10

Three things to remember

- Drafts are private. Only **Publish** changes the website.
- Nothing is lost: every publish is kept in History, and every save you make with `Ctrl S`.
- Use your own account. The activity log records who changed what.

Signing in, and *who can do what*

Signing in

Go to `mjazo.vercel.app/admin`. Sign in with your email and password, or click **Email me a sign-in link** and open the link from your inbox. **Forgot password?** sends a link to set a new one.

New people are invited by an Owner or Admin from **Team** → **People & roles**. Open the invitation email, then set a password under **Account** (top of the menu).

Links can take a few minutes to arrive. Ask for one, then wait; asking again and again slows them down.

Two-step sign-in

Owners and Admins must use it. Everyone else can turn it on under Account. You need an authenticator app on your phone: Google Authenticator, Microsoft Authenticator or 1Password.

- 1 Scan the QR code the admin shows you.
- 2 Type the 6-digit code from the app.
- 3 Each time you sign in, type the new code.

Lost your phone? Ask an Owner to reset your two-step sign-in from People & roles, then set it up again.

Roles

ROLE	WHAT THEY DO	PUBLISH	PRICES & SETTINGS
Owner	Everything, including people, roles and restoring backups.	Yes	Yes
Admin	All content, prices, settings and publishing. Can invite people (not Owners).	Yes	Yes
Editor	Edit and publish content: pages, services, blog, help, menus.	Yes	No
Author	Write blog posts and help articles; an Editor publishes them.	Sends for review	No
SEO	SEO fields on every page, redirects and audits.	SEO only	No
Viewer	Looks around and previews; changes nothing.	No	No

Fields your role can't change are shown greyed out. If you need one changed, ask someone whose role can.

The admin *at a glance*

MENU

WHAT'S THERE

Dashboard	What's waiting for you (drafts, reviews, schedules), anything left to set up, and the latest activity.
Media	Every picture, video, 3D model and PDF on the site.
Pages	Every page: home, about, offers, Plus and more. Also the shared templates every world, category, service and area page uses, and Block pages (page 7).
Catalogue	Worlds, categories, services, areas and bundles. Prices live here.
Blog · Help · Legal	Posts, help topics and the legal documents.
Navigation	The header and footer menus, and the buttons and labels used across the site.
Settings	Company and contact details, booking policy, Plus and referrals, feature switches, SEO settings, catalogue rules and search words.
Tools	SEO, Redirects and Urdu translation.
Team	People & roles, the activity log and backups.

What the status means

STATUS	CUSTOMERS SEE	WHAT TO DO
● Live	This version. Nothing is waiting.	Edit whenever you like.
● Unpublished changes	The live version. Your edits wait in a draft.	Preview, then Publish, or Discard changes.
● Draft	Nothing yet: it has never been published.	Finish it and Publish.
● Scheduled	The live version until the time you picked.	Nothing; it publishes by itself.
● Hidden	Nothing: it's off the site.	Restore to site to bring it back.

Everything starts with the content the site was built with. An item nobody has edited yet shows as **Live** with that built-in content. Your first publish replaces it, and the built-in version stays in the code as a safety net.

Edit, check, *publish*

Drafts save themselves

A moment after you stop typing, your changes are saved as a draft and the top of the page says **Draft saved**. Close the tab and come back later; the draft waits for you.

Save a version: Ctrl S

On a Mac, ⌘ S. This saves now and keeps this version in History, so you can come back to it. Do it before a big rewrite.

Preview

Opens the real page with your draft in a new tab. Only you see it. Check it on your phone as well as a computer.

Live preview and click-to-edit

Live preview shows the page beside the form and updates as you type. Click any text in it to jump straight to its field.

Publish

Puts your draft on the website straight away. Every publish is kept in History.

Schedule publish

Pick a date and time (Karachi time). The draft publishes by itself, once an Owner has finished setting this up (the Dashboard says if not). If someone who can't publish edits it in the meantime, the schedule is cancelled so nothing unchecked goes live.

Submit for review (Authors)

Authors can't publish. **Submit for review** puts the draft on the Dashboard under **Waiting for you** for an Editor to check and publish.

Discard changes

Throws the draft away. The live version stays as it is.

Hide from site

Takes an item off the website, for example a service you've stopped offering. **Restore to site** brings it back.

Two people, one item

If someone else saved the same item while you were editing, you get a warning instead of overwriting their work. Reload to see their changes, then make yours again.

Before you publish

- Preview on a phone: most customers book from one.
- Prices: check the amount and the "from" wording. Only Owners and Admins can change them.
- If the Urdu site is switched on, check the Urdu too (page 8).

History, activity *and backups*

History

Every item has a **History** button. It lists every publish, every   save, every restore and every import, with who did it and when.

- 1 Click **Compare** on a version.
- 2 Choose what to compare it with: **what's in the form now**, or **the live version**. Only the differences show, word by word: ~~struck-out words~~ are in the old version, **highlighted words** are newer.
- 3 To go back, click **Restore**. The old version becomes your draft. Publish it to make it live.

Activity log

Team → **Activity log** shows who published, scheduled, hid, restored, invited or downloaded what, and when. Use it to answer "who changed this price?".

Backups

Download (Owners and Admins)

Team → **Backup** → **Download backup** gives you one file with everything people have saved here: pages, catalogue, posts, settings (live, drafts, scheduled and hidden), the media library's records and the redirects.

Download one before big changes and keep it somewhere private: it holds all the site's content.

Not in a backup: the built-in content (it ships with the site) and the photo files themselves (they stay in storage).

Restore (Owners only)

Choose the file, check the summary, then pick:

- **As drafts** (recommended): every entry comes back as a draft. The website doesn't change until someone reviews and publishes.
- **Exactly as in the backup**: live content, drafts, schedules and hidden items become what they were. The website changes straight away.

A restore never deletes anything. Entries that already match are left alone, and every restored entry gets an "Imported" version in its History.

New pages *from blocks*

For a campaign, an event or a landing page, build a page from ready-made blocks in Mjazo's style. No designer needed.

- 1 **Pages** → **Block pages** → **New**. Give it a title and an address, for example `/campaigns/eid-sale` : lowercase, words joined with hyphens.
- 2 **Add blocks** with the + between them. Drag the handle to reorder, or use Duplicate and Remove.
- 3 Turn on **Live preview** to see the page as you build it, then Publish.

Hero

A big headline, a short line and buttons, at the top.

Image and text

A photo beside a heading and a few sentences.

Services

Bookable services: ones you pick, a whole category, or the most booked.

Call to action

A closing headline with buttons.

Numbers

Key figures, which can count live (see page 9).

Gallery

Several photos together.

Spacer

Extra space, with or without a line.

Text

Headings, paragraphs, lists and links.

Cards

Three or four short points, each with an icon.

Questions

Questions and answers that open on tap.

Promises strip

Mjazo's promises in one band.

Video

A video from the media library.

Enquiry form

Customers leave their number; it arrives with the other website requests.

Tips for a good-looking page

- Each block has a background: **Paper**, **Ink**, **Saffron** or **Blush**. Alternate them, and use Saffron at most once.
- Put **one word** of a headline in stars to make it the italic accent: *A headline for **this** page.*
- Change a published page's address and the old one redirects to it by itself.

Media, and the *Urdu* site

Pictures and media

Upload in **Media**, or straight from any image field.
Accepted: JPG, PNG, WebP, AVIF and GIF up to 10 MB; MP4 and WebM up to 50 MB; 3D models (GLB) up to 25 MB; PDF up to 10 MB.

Alt text

Describe what the picture shows, for blind visitors and for Google: "A Mjazo pro threading a customer's brows at home". The AI can suggest one; it's marked *Written by AI*. Check it before saving.

Focal point

Click the important part of the picture, such as a face. When the site crops the picture for phones, that part stays in view.

Replace file

Swaps the file but keeps it in place. Every page using it shows the new one, so there's no need to edit each page.

Before deleting

Each item shows where it's used. Delete only what says *Not used anywhere yet*.

Our pictures: real Karachi homes and real pros. Never retouch or lighten skin.

Urdu

Every text field has an Urdu side. Click اردو at the top of an editor to show the Urdu fields next to the English ones.

AI translation

Translate the rest with AI in an editor fills the empty Urdu fields. Each one carries a purple *AI translation, needs review* label. Read them, correct what's wrong, then click **Mark AI Urdu as reviewed**.

Tools → Urdu translation

Shows how much of the site has Urdu, and can translate everything still missing in one go.

Going public

The Urdu site at `/ur` goes public when an Owner or Admin switches it on in **Settings → Feature switches**. Before that, a native speaker reads the Urdu, especially prices, policies and anything legal.

Changing the English doesn't change the Urdu. When you change what an English sentence says, update its Urdu too.

SEO, addresses *and special text*

SEO

Most items have an **SEO** section: the title and description Google shows, and the picture shown when someone shares the link on WhatsApp. It previews the Google result and gives a score with tips.

Tools → **SEO** lists every page with its score, the checks that failed and its speed. Once an Owner has switched it on, the whole site is checked again by itself every Monday.

Addresses and redirects

When the address of a service, post or page changes, the old address redirects to the new one by itself, so old links and Google keep working.

Tools → **Redirects** is for anything else, such as a short address for a campaign (`/eid` → `/campaigns/eid-sale`). It warns about addresses that lead nowhere.

Special text

Placeholders: `{{ ... }}`

Some text has placeholders, such as `{{policy.freeChangeHours}}`. The site fills them in from Settings, so a change there updates the text everywhere. Keep the double braces exactly as they are.

WRITE	SHOWS
<code>{{catalog.serviceCount}}</code>	How many services there are
<code>{{catalog.areaCount}}</code>	How many Karachi areas are live
<code>{{catalog.areaNames}}</code>	Their names
<code>{{policy.freeChangeHours}}</code>	Hours for free changes
<code>{{plus.priceText}}</code>	The Plus price

The italic accent: `*word*`

In headlines, one word in stars becomes the italic accent. Use it once per headline.

Writing *for Mjazo*

- **Warm, confident, a little cheeky, never cheesy.**
Short sentences. Start with the verb: "Book a facial", not "Facials can be booked".
- English with Roman Urdu touches; Urdu where it helps the customer.
- Say **clear prices**, never "cheap".
- **No fake numbers, reviews or urgency.** No "only 2 slots left" unless it's true.
- No whitening or fairness words. Say "brightening facial".
- When a customer is talking to an AI, say so.

OUR LINES

Everything your home needs.
One tap.

Ghar ka har kaam. Pakka.

Verified pros for every corner of your Karachi home,
at clear prices you pay after.

When something goes wrong

IF...	THEN
You published by mistake	History → Compare to find the right version → Restore → Publish.
A draft is a mess	Discard changes. The live version is untouched.
Something looks broken on the site	Undo the last publish from History, then tell an Admin what you changed (the activity log helps).
Many items went wrong at once	An Owner restores the last backup as drafts and publishes what's right.
You can't sign in	Use Forgot password? or Email me a sign-in link. Lost your phone? An Owner resets your two-step sign-in.
Your role can't change a field	Ask an Editor (content), an Admin (prices, settings) or an Owner (people, backups).

Questions? Ask an Owner: mjazosupport@gmail.com.
